SKYHI

"NEW-LINE" Hydraulic JACKS

The Skyhi "New-Line" hydraulic jack is introduced with the object of supplying commercial and passenger vehicle users with jacking equipment at an attractive and economical price.

Robustly constructed, all steel throughout, to withstand rough usage, the new models combine thirty years hydraulic experience with the following three essential factors:

Sound Design — Superior Materials
Skilled Craftsmanship

Each model is a single ram type embodying all the exclusive features and devices which give Skyhi Jacks supremacy over all other makes. Pumping and releasing are carried out without changing the handle position—a twist of the operating handle is all that is necessary. A hand-adjusted extension screw enables the operator to obtain full hydraulic lift and the Skyhi patented safety device prevents damage to the mechanism through over-pumping.

Skyhi "New-Line" Jacks will give years of continued and reliable service, requiring very little attention except an occasional topping-up with jack fluid.

READ THE SPECIFICATIONS

MODEL J.401 — Rated Capacity 4 TONS

Closed Height	10"
Hydraulic Lift	6½"
Screw Extension	5"
Maximum Height	21½"
Weight of Jack	15 lbs.
